No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1984 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for regular articles.

CONTENTS OF VOLUME 28

Number 1, July 1984

S.-P. Olesen, M. L. de Saint-Aubain, and M. Bundgaard. Permeabilities of Single Arterioles and Venules in the Frog Skin: A Functional and Morphological Study 1

Kenneth G. Proctor, David N. Damon, and Brian R. Duling. Inaccuracies in Blood Flow Estimates in Microvessels during Arteriolar Vasoconstriction 23

Stephen M. Shea and Jana Raskova. Glomerular Hemodynamics and Vascular Structure in Uremia: A Network Analysis of Glomerular Path Lengths and Maximal Blood Transit Times Computed for a Microvascular Model Reconstructed from Subserial Ultrathin Sections 37

G. L. Anderson, F. N. Miller, and R-J. Xiu. Inhibition of Histamine-Induced Protein Leakage in Rat Skeletal Muscle by Blockade of Prostaglandin Synthesis 51

M. Joan Dunlop, Martin M. Lee, Peter B. Canham, and C. P. S. Taylor. Kinetics of Adhesive Interaction *in Vitro* of Human Erythrocytes in Plasma 62

Shirley M. Mueller. Adult Sympathetic and Vascular Dysfunction in Experimental Juvenile-onset Diabetes Mellitus 75

S. G. Eskin, C. L. Ives, L. V. McIntire, and L. T. Navarro. Response of Cultured Endothelial Cells to Steady Flow 87

T. C. Skalak, G. W. Schmid-Schönbein, and B. W. Zweifach. New Morphological Evidence for a Mechanism of Lymph Formation in Skeletal Muscle 95

P. A. Stewart, L. G. Clements, and M. J. Wiley. Revascularization of Skin Transplanted into the Brain: Source of the Graft Endothelium 113

Richard W. Gange, Kurt F. Jaenicke, R. Rox Anderson, and John A. Parrish. Effect of Preirradiation Tissue Target Temperature upon Selective Vascular Damage Induced by 577-nm Tunable Dye Laser Pulses 125

Andrea J. Paskins-Hurlburt, Norman K. Hollenberg, and Herbert L. Abrams. Centripetal Spread of Endothelial Cell Mitotic Activity in the Artery Leading to a Rapidly Growing Tumor 131

Announcement 141

Number 2, September 1984

A. Colantuoni, S. Bertuglia, and M. Intaglietta. The Effects of α- or β-Adrenergic Receptor Agonists and Antagonists and Calcium Entry Blockers on the Spontaneous Vasomotion 143

William G. Mayhan and William L. Joyner. The Effect of Altering the External Calcium Concentration and a Calcium Channel Blocker, Verapamil, on Microvascular Leaky Sites and Dextran Clearance in the Hamster Cheek Pouch 159

Paul F. McDonagh, A. Tracy Niven, and David Roberts. Direct Visualization of the Coronary Microcirculation for Pharmacologic and Physiologic Studies 180

Roger C. Wagner and Candy S. Robinson. High-Voltage Electron Microscopy of Capillary Endothelial Vesicles 197

Nancy C. Joyce, Pietro DeCamilli, and Janet Boyles. Pericytes, Like Vascular Smooth Muscle Cells, Are Immunocytochemically Positive for Cyclic GMP-Dependent Protein Kinase 206

M. E. Michel, N. L. Shinowara, S. Odman, and S. I. Rapoport. Morphology of Endoneurial Blood Vessels of Frog Sciatic Nerve during Vascular Perfusion 220

James B. Bassingthwaighte, Tada Yipintsoi, and Thomas J. Knopp. Diffusional Arteriovenous Shunting in the Heart 233

James C. Parker, June Ryan, and Aubrey E. Taylor. Plasma–Lymph Albumin Kinetics, Total Lymph Flow, and Tissue Hematocrit in Normally Hydrated Dog Lungs 254

Brief Communication

Lawrence J. Nugent and Rakesh K. Jain. Pore and Fiber-Matrix Models for Diffusive Transport in Normal and Neoplastic Tissues 270

Book Review

Miles G. Johnston. *Lymphangiology*. Edited by M. Földi and J. R. Casley-Smith 275

Number 3, November 1984

Thomas Belval, J. David Hellums, and R. Thomas Solis. The Kinetics of Platelet Aggregation Induced by Fluid-Shearing Stress 279

Thomas A. Bronikowski, John H. Linehan, and Christopher A. Dawson. A Model of the Vascular Resistance and Compliance Distribution in a Lung Lobe 289

Stuart K. Williams and Nina J. Solenski. Enhanced Vesicular Ingestion of Nonenzymatically Glucosylated Proteins by Capillary Endothelium 311

Ronald J. Korthuis, C. Y. Wang, and W. S. Spielman. Transient Effects of Histamine on the Capillary Filtration Coefficient 322

Naomi Oren-Wolman and Paul H. Guth. Adrenergic Sensitivity of Different-Size Gastric Submucosal Arterioles 345

Maya Simionescu, Nicolae Simionescu, and George E. Palade. Partial Chemical Characterization of the Anionic Sites in the Basal Lamina of Fenestrated Capillaries 352

William I. Rosenblum and Joseph E. Levasseur. Microvascular Response of Intermediate-Size Arterioles on the Cerebral Surface of Diabetic Mice 368

Edward O. Weselcouch, Christopher J. Luneau, Kandace J. Williams, and Robert E. Gosselin. The Failure of Serum Albumin to Affect Capillary Permeability in the Isolated Rabbit Heart 373

Technical Report

Kouichi Ashikawa, Hiroshi Kanatsuka, Toshimi Suzuki, and Tamotsu Takishima. A New Microscope System for the Continuous Observation of the Coronary Microcirculation in the Beating Canine Left Ventricle 387

Meeting Report

M. Asano, Summary of Papers Presented at the Ninth Meeting of the Japanese Society for Microcirculation, February 4 and 5, 1984, Tokyo, Japan 395

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for the printer. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the engraving should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Color illustrations are acceptable, but at the author's expense. An excessive number of tables or illustrations may necessitate a charge to the author.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Handbook for Authors,* 1978, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

SIMIONESCU, N., SIMIONESCU, M., AND PALADE, G. E. (1978). Structural basis of permeability in sequential segments of the microvasculature of the diaphragm: I. Bipolar microvascular fields. *Microvasc. Res.* **15,** 1–16.

BELAMARICH, F. A. (1976). Hemostasis in animals other than mammals: The role of cells. *In* "Progress in Hemostasis and Thrombosis" (T. Spaet, ed.), Vol. 3, pp. 191–220. Grune and Stratton, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1980. Unpublished observations and personal communications should be cited in the *text* as such.

Reprints. Authors will receive 50 reprints at no charge. Additional copies may be ordered when galley proof is mailed.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
